

GAME ARCHAEOLOGY DOSSIER - REVISION 0.7.6

Discovery report

Cut content, internal variants, fragile objectives, routes, weapons, vehicles, and restoration feasibility.

Commercial 1.12 installation + Sabre Squadron
Local research and period sources - 16 September 2026

00 Executive summary

Central conclusion

The installation contains more usable remnants than the game menus reveal. The stable audit now covers all 33 solo missions, the nine commercial cooperative scenarios, and 25 scripted multiplayer variants. Complete surviving data is restored, while work that needs new creation is kept separate and is never presented as recovered official content.

Strongest findings

- All 33 declared solo missions were found. No complete final campaign is merely hidden from the menu.
- 82 readable official mission trees contain 104,405 boundary surfaces and 561 named border objects that can be neutralised.
- CMP 2.6.5 is pinned to 23,600 archive entries, 23,277 installable files, and 156 map entries.
- All 47 commercial multiplayer folders and both prototypes are declared after installation.
- The 25 scripted multiplayer variants contain 203 bindings and 183 available scripts. Their twelve loose scripts have been classified.
- Update 1.12 explicitly disables the Africa 1 and Africa 4 easter egg branches while leaving their scenes intact.
- ENGLAND, CASTLE1, and CASTLE2 prove internal branches, but not complete standalone maps.
- M323, Aichi, La-5, and Fa 223 models are present. A complete flyable implementation is not proven.
- London_mp/Poland and the announced England/London campaign are separate historical subjects.

Confidence levels

Level	Criterion	Use
A - confirmed	Reproducible local observation or direct statement	Restoration basis
B - corroborated	Period source plus local trace, or two independent sources	Strong evidence
C - probable	Screenshot, identifier, or partial structure	Prototype only
D - hypothesis	Single interpretation or memory	Never distribute as fact

01 Online play and the community collection

RpR still publishes a replacement master server, a GameSpy redirection procedure, active servers, and CMP 2.6.5 in 2026. A TCP probe of the master server on port 28910 succeeds.

Component	Finding	Status
GameSpy resolution	Three retired host names redirect to 78.47.255.224	Automated
DirectPlay	Required for networking on current Windows systems	Checked
Internet list	Infrastructure is present; the real in-game display still needs a human test	Manual test
CMP 2.6.5	Archive locked by exact size and SHA-256	Integrated
2026 servers	RpR publishes several ports and modes	Public

Audited CMP package

Measure	Value
Commit	793d979748b27a9924fcc30fa0fba6edb7cd70f
Size	1,084,146,265 bytes
SHA-256	DD0CA6FED1FB056DCB064813C223E0423F1FD9B13E291D106D8B983C467ABC33
Contents	23,600 entries; 23,277 files; 156 map entries
Installed size	3,118,285,955 bytes

02 Exploration without boundary failure

Mission boundaries use two surface flags: warning 0x40 and failure 0x20. The pack clears only mask 0x60. Physical objects explicitly named border are handled separately by replacing their label at constant length, a method whose non-solid result is supported by tree.klz reverse-engineering tests. Terrain, walls, floors, fences, and other collision properties remain intact.

Corpus	Trees	With limits	0x60 surfaces	Border objects	Collisions
Final official	82	75	104,405	561	2,446,014
CMP built-in test	Sample	-	1,202	checked	-

Community research into tree.klz and the renaming experiment

What the fix does not do

It prevents boundary warnings and mission failure and neutralises objects explicitly named border. It does not create missing terrain, collision, AI navigation, or sectors. Exploring the edge of a map may therefore reveal usable scenery, an unrelated physical obstacle, or empty space.

Research value

Free exploration is an archaeology tool. It allows every map edge to be inspected without an immediate penalty. A passage becomes a restorable route only when its geometry, collision, and mission progression remain coherent.

Safety

Every tree is written as a loose override after structural validation. File size remains unchanged, and a second audit must find no residual boundary marker. Every replaced target is backed up before writing.

03 Compound objectives and routes

Mission	Fault	Correction	Nuance
Arctic 3	A tracked actor is killed by another sequence	Amik_2 becomes Amik_1	One route can bypass the trigger; fragile, not always impossible
Africa 2	Tank death never reaches completion	Signal reconnected to the existing manager	All resources already exist
Normandy 2	Counter exists only after the first death	Initialised to five	The perfect result becomes representable

Reduced or disabled actions

CASTLE2 is the clearest example. Four structured objectives survive, while a fifth objective for recovering confiscated weapons is commented out. Its helper scripts are still present. This proves a removed action, but not a complete standalone mission.

The lost route choice in France

Operation Overlord - Lighthouse still contains five cameras, two paths, and two underground entrances. The link between Spawnsingle01 and X_N1_player01.scr disappeared. Restoring it brings back the original guidance toward both approaches without inventing a tunnel.

Research rule

An old three-action objective is confirmed only when all three triggers, their counter, the objective text, and the usable routes are found. An isolated prop or briefing line is not enough.

04 Seven easter eggs, including two disabled branches

Mission	Local state	Finding
Tutorial	Sequence and gold bar present	Historical route blocked in 1.12 by the vehicle-climbing change
Africa 1	Complete effects	Patch forces mrtvi_panaci from 1 to 0; exact restoration is possible
Burma 1	Complete	Every enemy must die before the third skull
Alps 1	Complete	Four actors must be gathered by the rock
Alps 2	Complete	Three successive zones for the same gold bar type
Normandy 1	Complete	Ten-bottle counter followed by a signal to the guard
Africa 4	Complete effects	Patch replaces the ACTIVATED jump with END

Africa 4 - new evidence

Keys A, B, and C are items 240, 241, and 242. When all are within three metres, the original script sets a persistent value and activates meteor01. Update 1.12 disables only the branch. Models, paths, and particles remain.

Africa 1 - the second confirmed neutralisation

Version comparison shows that patch 1.12 forces to zero a condition required by the four deaths in the jeep scene. The three visitors, red armour, fire gate, and camera remain connected to the mission.

0.7.6 decision

Restore Africa 1 and Africa 4 through loose trigger overrides. Leave the five secrets that already work untouched. Keep the Tutorial under study until a 1.12 solution preserves the original hiding place.

05 London: two histories, not one

The 2001 press named London and Germany among the locations of 24 missions and seven campaigns without listing all seven campaigns. In June 2003, Games.cz still described a ruined London but explicitly separated the already replaced English campaign from a possible British multiplayer remnant. By September, GameSpot listed six campaigns and 23 missions. These changing totals prove redesign, not a calculable number of hidden campaigns.

Element	Evidence	Conclusion
England/London campaign	Period announcements plus the 14-script ENGLAND folder	Cut project; no complete solo map found
London_mp in the base game	Scene and collision, incomplete multiplayer package, undeclared	Arena under construction
London_mp in Sabre Squadron	Completed resources plus name=Poland dir=London_mp	Finished and published multiplayer map

Interpretation correction

Poland is the completed London_mp folder. The chronology makes it plausible that it is the British multiplayer remnant mentioned in June 2003. This does not prove that the arena is the whole announced English campaign, or that it preserves a solo mission or the Gary Bristol story.

06 Internal branches and prototypes

Folder	Contents	Classification
ENGLAND	14 scripts: hostage, guards, sniper, HELP calls, detectors	Historical fragment without a complete map
CASTLE1	60 scripts from an older branch	Mission architecture; standalone package absent
CASTLE2	55 scripts, characters, four objectives plus a commented fifth	Demonstration possible with modern creation
ALPS3_OBJ	Earlier script subset	Superseded by the complete active Sabre mission
ARDENS1_OBJ	Older script skeleton	Superseded by the complete active Sabre version
NORMANDY3_MP_ZONE	Truncated official variant; six valid native files	Normandy3 MP fallback, compatible but not faithful
AFRIKA5_MP	7 native files plus 6 matching resources	Completed and enabled as a prototype

Finishing very incomplete creations

The project can build demonstrations from ENGLAND or CASTLE2, but must keep three layers separate: surviving official data, indispensable technical joins, and newly created narrative or visual material.

Priority

CASTLE2 is the strongest next candidate because its logic is richer and removed objective 5 is identifiable. ENGLAND remains a research prototype until original geometry is found.

07 Aircraft and vehicles: corrected inventory

Searching only by common names produced false negatives. Internal spelling, spaces, and one typo explain several mistakes.

Element	Local files	Verdict
Me 323	LA_M323.4ds plus simplified version	Model present; controllability unproven
La-5	la_La-5.4ds plus simplified version	Model present; no identified mission
Aichi Val	la_aici.4ds plus simplified version	Model present under shortened internal spelling
Fa 223	la_Fa 223.4ds plus simplified version	Model present; the space hid the search result
Ju 52	12 resources and variants	Present and called by an Africa 1 scene
Fw 200	Main plus simplified model	Orphan or scenic asset
Li-2	Main plus simplified model	Orphan or scenic asset
DFS 230	Internal name DSF 230	Glider present under spelling variant

What the models prove

M323, La-5, Aichi, and Fa 223 contain named engines, propellers or rotors, moving surfaces, seats, and cameras. They are not flat scenery. However, no complete chain of controls, physics, damage, cockpit, AI, and flyable mission is yet proven.

Correct classification

Vehicle model present; historical playability claim; finished flyable vehicle not proven.

08 Weapons and equipment

Element	Trace	Conclusion
Benelli M4	18 first-person animations, sounds, icon, texture, and ammunition 179	Best additive candidate; object slot reused by the compass
Vickers K	Mounted and used on the SAS Jeep	Active vehicle weapon, not a portable weapon
Flammenwerfer 35	Name and ammunition; no complete weapon model	Announced and removed; reconstruction required
Portable No. 2	Name and ammunition; same missing chain	Announced and removed
flame1.4ds	471 bytes, only object fire01	Flame effect, not a flamethrower
Garrote	Named by the lead designer	Announced weapon; complete local implementation unproven
ZK-383	Alpha/beta screenshot	Credible visual clue, no playable chain found
FG 42 / MG 34	Orphan identifiers or ammunition	Candidates, not proof of finished weapons

Why the flamethrowers cannot simply be enabled

A restoration would need a held and world model, animations, tank, sounds, range, damage, reactions, AI, and multiplayer synchronisation. A first implementation would be a modern experimental mod even though the names come from the original project.

09 Cut plot and scenes

Element	What is attested	Limit
Gary Bristol	Announced team leader linked to Dunkirk and a continuous plot	Dialogue and complete campaign absent
Scarred Man	Announced recurring opponent	No confirmed named final equivalent
Mr Murrau	Jet-engine expert to protect across three missions	Mission arc not found
Bridge with train	Shown or named among pre-release material	Exact location and level unknown
Warehouse	Same cut-content and redesign dossier	Studio answer is global, not item-specific
London and Germany	Locations announced in 2001	A complete playable campaign is not proven

Project redesign

Sources describe an engine change, the departure of the lead designer in 2001, and a redirection of the project. Promised campaigns, objectives, cooperation, and vehicles may therefore have been removed, replaced, or redistributed.

Caution with the 2004 interview

The studio broadly confirms that many pre-release elements changed or were removed. The answer does not separately confirm every bridge, train, or warehouse screenshot.

10 Corrections to the preliminary dossiers

The two PDFs supplied at the beginning of the investigation were a starting point. Direct archive auditing requires these corrections.

Initial reading	New evidence	Revised classification
No identifiable Me 323 or Aichi model	LA_M323.4ds and la_aici.4ds found	Models present
Fa 223 missed by the filter	la_Fa 223.4ds contains a space	Model present
Ju 52 and La-5 absent vehicles	Models found; Ju 52 called in Africa 1	Present, controllability unproven
ALPS3_OBJ abandoned mission	Sabre supplies the complete active variant	Older branch, not a lost level
ARDENS1_OBJ standalone prototype	Complete Sabre version takes precedence	Older branch
Three impossible objectives	Arctic 3 can be bypassed on one route	Broken or inconsistent
Six easter eggs	Africa 4 retains a seventh disabled effect	Seven in the base game

Main lesson

A common-name search is not enough. Case, spaces, internal misspellings, and simplified assets change the result. Every alleged absence must be checked against the full inventory, name variants, model contents, and scene references.

11 Current status and roadmap

Workstream	Established	Next step
Network	Master server reachable; configuration automated	Display the list and join a game
Official campaigns	33 of 33 inventoried	Search variants, branches, and objectives, not a missing final campaign
Exploration	82 official and 225 local loose trees checked	Test edges, collision, and sectors mission by mission
Objectives	14 groups tracked and 73 detailed states	Play alternate routes and save/reload
Easter eggs	Africa 1 and Africa 4 restored	Validate in game; solve the Tutorial under 1.12
Remnants	Normandy3 Zone and Africa5 Prototype enabled	AI, mode, and stability tests
London	Announced campaign separated from Poland	Search for more assets before creating anything
Prototypes	ENGLAND and CASTLE1/2 classified	CASTLE2 demonstration with objective 5
Weapons	Benelli prioritised; flamethrowers correctly diagnosed	Separate additive prototype, then new models and behaviour
Aircraft	Exact models located	Choose one aircraft and build a test bench
Community	CMP 2.6.5 integrated	Review further packages one by one for licences and conflicts

Recommended order of work

- 1 In-game testing of network play, objectives, both restored easter eggs, and both prototypes.
- 2 Make the Tutorial secret reachable under 1.12 without moving its original hiding place.
- 3 Audit CASTLE2 against a related map and restore objective 5 in an isolated demonstration.
- 4 Search alternate paths mission by mission, especially the French approaches and multi-action branches.
- 5 Build a clearly labelled experimental flamethrower prototype.
- 6 Study one aircraft at a time in a dedicated test mission.
- 7 Begin an England or Gary Bristol campaign only when historical facts and new story material are kept separate.
